## TEST REPORT

#### **REPORT ISSUED TO**

## **ORBITA TECHNOLOGY CO., LTD**

Zhoukangwei Villager Group, Changbu Village, Xinxu Town, Huiyang District Huizhou City, Guangdong Province

#### **SECTION 1**

## **SCOPE**

Intertek has conducted an evaluation for ORBITA TECHNOLOGY CO., LTD to determine the fire resistance characteristics of the Hotel Lock, Model E3064P in Single Leaf Single Action Timber Composite Fire Door. This test was designed to demonstrate evaluation on the Hotel Lock of Model S3063P. This evaluation began on November 15, 2022 and was completed on March 9, 2023. The test was conducted on January 30, 2023.

The test was conducted in accordance with EN 1634-1:2014+A1:2018, Fire resistance and smoke control tests for door and shutter assemblies, openable windows and elements of building hardware – Part 1: Fire resistance test for door and shutter assemblies and openable windows.

This report does not constitute certification of this product nor an opinion or endorsement by this laboratory.

Intertek B&C will service this report for the entire test record retention period. The test record retention period ends ten years after the test date. Test records, such as detailed drawings, datasheets, representative samples of test specimens (where required by Certification or Accreditation bodies), or other pertinent project documentation, will be retained for the entire test record retention period.

## TEST REPORT

### **SECTION 2**

## **SUMMARY OF TEST RESULTS**

Product Name: Hotel Lock

Series/Model: E3064P and S3063P

The test assembly satisfied the performance requirements for the following periods:

Fire resista	nce	Test results					
		Doorset A open into the	Doorset B open away from				
		furnace	the furnace				
	Sustained flaming	68 minutes, no failure	68 minutes, no failure				
Integrity	Gap gauge	68 minutes, no failure	68 minutes, no failure				
Cotton pad		66 minutes	68 minutes, no failure				
Insulation		66 minutes	68 minutes, no failure				

The test was discontinued after a period of 68 minutes at the request of the sponsor.

This report details the method of construction, the test conditions and the results obtained when the specific element of construction described herein was tested following the procedure outlined in EN 1363-1, and where appropriate EN 1363-2. Any significant deviation with respect to size, constructional details, loads, stresses, edge or end conditions other than those allowed under the field of direct application in the relevant test method is not covered by this report.

Because of the nature of fire resistance testing and the consequent difficulty in quantifying the uncertainty of measurement of fire resistance, it is not possible to provide a stated degree of accuracy of the result.

## **SECTION 3**

## **TEST METHODS**

The specimens were evaluated in accordance with the following:

**EN 1634-1:2014+A1:2018,** Fire resistance and smoke control tests for door and shutter assemblies, openable windows and elements of building hardware - Part 1: Fire resistance test for door and shutter assemblies and openable windows

EN 1363-1:2020, Fire resistance tests - Part 1: General requirements

## **TEST REPORT**

### **SECTION 4**

## MATERIAL SOURCE/INSTALLATION

The specimens were randomly selected by Intertek B&C personnel Jason Yuan at the ORBITA TECHNOLOGY CO., LTD's factory, located at Zhoukangwei Villager Group, Changbu Village, Xinxu Town, Huiyang District, Huizhou City, Guangdong Province. The subject test specimen is a traceable sample selected from the manufacturer's facility warehouse and signed prior to shipment on December 24, 2021. Intertek selected the specimen and has verified the composition, manufacturing techniques and quality assurance procedures.

A description of the test assembly is given in the table below. All values quoted below are nominal, unless tolerances are given. All dimensions are in mm in this report, unless otherwise specified.

TESTED ASS	TESTED ASSEMBLY DESCRIPTION								
	Туре	Single Leaf Single Action Swing Timber Composite Fire Door							
	Nominal Size	836 mm wide by 2040 mm high by 55 mm thick							
		Facing: 2.5 mm MDF, density of 816 kg/m <sup>3</sup>							
Door		Sub-facing: 5 mm Magnesium oxide board, density of 1339 kg/m <sup>3</sup>							
	Main Material	Core: 40 mm Mineral board, density of 452 kg/m <sup>3</sup>							
		Rail: 60 mm x 30 mm solid wood, density of 731 kg/m <sup>3</sup>							
		Stile: 60 mm x 30 mm solid wood, density of 731 kg/m <sup>3</sup>							
	Nominal Size	906 mm wide by 2080 mm high by 140 mm deep							
Frame	Material	Solid wood, density of 731 kg/m³, clad with 5 mm Magnesium oxide board, density of 1339 kg/m³ on both sides							
Hardware	Hotel Lock, Model E3064P	Mortise lock, model 4585 Lock case size: 170 mm x 74 mm x 15 mm Backset: 45 mm; Latch throw: 12 mm Latch bolt: engaged; Deadbolt: disengaged.  Front escutcheon: Panel material: 2.0 mm Stainless Steel Size: L280 mm x W40 mm x D13 mm (without induction panel) Induction panel: ABS Back escutcheon: Panel material: 1.5 mm Stainless Steel							
		Size: L280 mm x W40 mm x D25 mm (without battery shell) Battery shell: ABS

## TEST REPORT

		Battery: need 6V of DC, use 1.5V AA dry battery Quantity: 4 pieces, in the back escutcheon.  Bedding material: Lock case is protected by 2 mm thick fireproof board.  Manufacturer: ORBITA TECHNOLOGY CO., LTD Zhoukangwei Villager Group, Changbu Village, Xinxu Town, Huiyang District, Huizhou City, Guangdong Province
		Brand name: ORBITA
	Hinge	Stainless Steel Hinge; Size: 4"× 4" × 3mm, Quantity: 3 pcs; Bedding material: Hinge is protected by 2 mm thick fireproof board.
	Door closer	Model: 603 Installation: Surface mounted standard installation on the opening face of door leaf.
Intumescer	nt Seal	Model: RP2004W2100, 20mm*4mm Location: 2 strips around door frame; 1 strip at right, left and top of door leaf edge; 2 strips at bottom of door leaf edge.

The sample ID number assigned by the test lab is \$221115007\$HF.001~002.

Documents and samples of two types of Hotel Lock including Model E3064P and S3063P were checked, and found that these Hotel Locks have same design, same function and similar cut-out holes size. Mortise lock, model 4585 is used for these two Hotel locks. The main difference between them is shape of escutcheon, Model E3064P with integrated escutcheons is selected to test to cover Model S3063P with separate escutcheons.

The drawings of the Hotel Lock, the drawings of the fire door assembly and test wall construction can be found in Section 6, 7 and 8 respectively.

A comprehensive drawing and Installation Instruction of the Hotel Lock, Model of E3064P and S3063P are maintained on Intertek file.

The test assembly was installed in a steel restraint frame. The test doorsets were built into a concrete masonry unit partition, with fully mortared joints. The test assembly placed in front of the furnace for the fire exposure. Prior to the commencement of the EN 1634-1 fire test, the test doorsets to be test were checked for operability in the fire test frame by operating from fully closed to fully open, for 25 cycles. The test measurement data was shown in Section 9.

Version: 1 Sep 2022 Page 5 of 33 LFT-APAC-SHF-OP-10p

ei: +86 21-61136116 Fax: 021-61189921 Website: www.intertek.com

# **TEST REPORT**

Two identical doorsets were mounted in one test frame. Doorset A was mounted so that the leaf swung towards the fire and doorset B was mounted so that the leaf swung away the fire. Both doorsets were tested at the same time.

The nominal dimensions of the test wall were 3 m high by 3 m wide.

After positioning the assembly frame over the furnace opening, the burners were ignited and the timer was started. Temperatures within the furnace were monitored using thermocouples and the data was recorded. The burners were controlled to keep the furnace temperatures within the allowable limits specified in the test standards. After 5 minutes, the furnace pressure was adjusted so that the neutral plane was established approximately 500 mm above notional floor level. Periodic observations were made of the surfaces of the test assembly during the fire resistance test.

Door deflection relative to the frame, where applicable, was monitored throughout the test. Position for measurement of deflection and unexposed temperature is presented in the drawing of Section 9.

## **TEST REPORT**

### **SECTION 5**

## **TEST RESULTS**

## Integrity

The doorset A withstood the fire resistance test without passage of flame or gases hot enough to ignite cotton waste for 66 minutes. No through openings or penetrations were evident at this 68 minutes fire exposure portion of the test. During this 68 minutes fire exposure period no significant flaming was observed on the unexposed face of the assembly.

After exposed to the fire for a period of 66 minutes, a cotton pad was applied at the top hinge of the door and the pad was ignited. The integrity failure was deemed to occur.

The doorset A therefore met the criteria of the test standards for integrity performance of 66 minutes.

The doorset B withstood the fire resistance test without passage of flame or gases hot enough to ignite cotton waste for 68 minutes. No through openings or penetrations were evident at this 68 minutes fire exposure portion of the test. During this 68 minutes fire exposure period no significant flaming was observed on the unexposed face of the assembly.

The doorset B therefore met the criteria of the test standards for integrity performance of 68 minutes.

## Insulation

Transmission of heat through the doorset A during the fire resistance test of 66 minutes did not raise the average temperature on the unexposed surface by more than 140°C above its initial value, and did not raise the maximum temperature on the unexposed surface by more than 180°C above the initial mean unexposed face temperature. In addition, the transmission of heat through the assembly did not raise the maximum temperature of the unexposed surface of the frame by more than 360°C for 66 minutes.

The Performance criteria "insulation" shall automatically be assumed not to be satisfied when the "integrity" criterion ceases to be satisfied.

The doorset A therefore met the criteria of the test standards for insulation performance of 66 minutes.

Transmission of heat through the doorset B during the fire resistance test of 68 minutes did not raise the average temperature on the unexposed surface by more than 140°C above its initial

value, and did not raise the maximum temperature on the unexposed surface by more than 180°C above the initial mean unexposed face temperature. In addition, the transmission of heat through the assembly did not raise the maximum temperature of the unexposed surface of the frame by more than 360°C for 68 minutes.

The doorset B therefore met the criteria of the test standards for insulation performance of 68 minutes.

A full set of test data is included in Section 10, and photographs have been presented in Section 11.

## **Test Observations for Doorset A:**

Ti	me	All observations are from the unexposed face unless noted atherwise					
Mins	Secs	All observations are from the unexposed face unless noted otherwise.					
00	00	Test started.					
01	12	Smoke issued from the top edge of the doorset.					
01	51	Smoke issued from the top of hinge edge of the doorset.					
02	00	Smoke issued from the bottom edge of the doorset.					
05	50	Smoke issued from the lock position of the doorset.					
10	05	There was an unidentified liquid emitted from the lock.					
27	35	No significant change.					
44	39	Light smoke issued from top right corner of the doorset.					
60	00	Darkening was observed on the top edge and the hinge position of the doorset.					
63	11	Intermittent flame was observed on the top hinge position.					
66	16	A cotton pad was applied at the top hinge of the assembly and the pad was ignited. The integrity failure was deemed to occur.					
68	00	Test was discontinued at the request of the client.					

## **Test Observations for Doorset B:**

Time		All observations are from the unexposed face unless noted otherwise.					
Mins	Secs	All observations are from the unexposed face unless noted otherwise.					
00	00	Test started.					
01	18	Smoke issued from the top edge of the doorset.					
01	30	Smoke issued from the top of hinge edge of the doorset.					
02	00	Smoke issued from the bottom edge of the doorset.					
05	50	Smoke issued from the lock position of the doorset.					
20	15	There was an unidentified liquid emitted from the lock.					
43	22	Darkening was observed on the top two hinges of the doorset.					
66	00	No significant change.					
68	00	Test was discontinued at the request of the client. Neither sustained flame, ignition of cotton pad nor through opening were evident on the unexposed surface of doorset.
